Exporting references - Library Search

EndNote Basic is a free online reference management tool, which the Library can offer support for should you need it

Users can create an account by signing up through **Web of Science** – this provides additional citation styles and attachment storage

We recommend using a **personal email address** to register, so that access to the account continues after graduation

There is also an optional “**Cite While You Write**” plug-in for Microsoft Word (PC or Mac), which will insert citations and references into a document by linking directly to the online EndNote Basic account

There are different procedures for getting references into EndNote depending on which database you are using

Exporting from the Library Search facility requires the creation of a RIS file which you will then import to EndNote

1  **online** [Is radical surgery needed in all surgical procedure for early stage cervical cancer?](#) ” ✉ 📁 ...

by [Uzan, C](#); [Gouy, S](#); [Pautier, P](#); [More...](#)

Import References

Importing from EndNote?

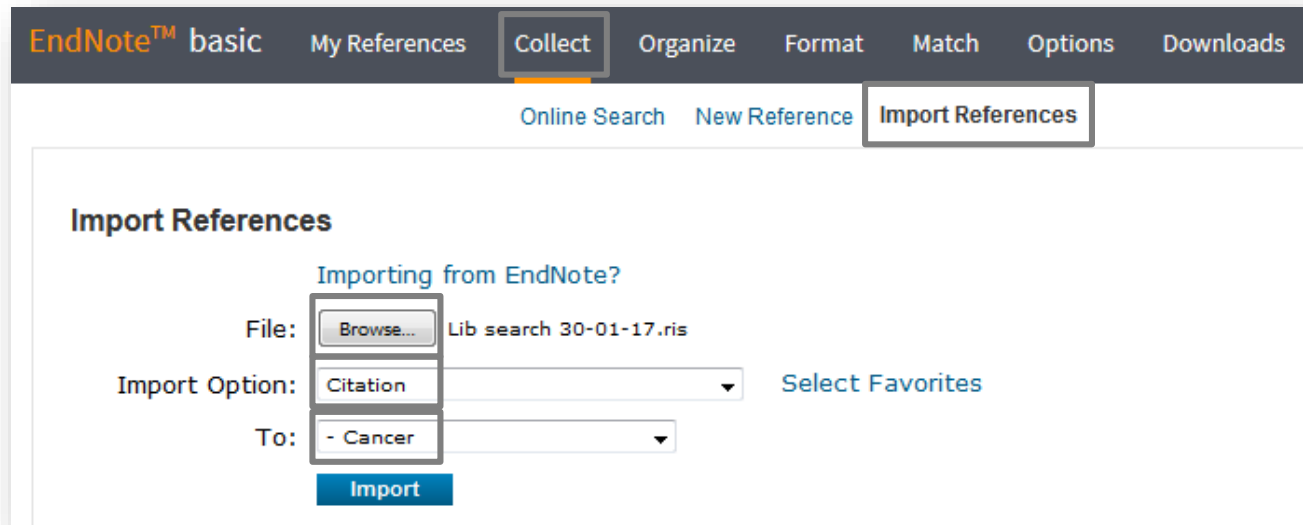

File: Lib search 30-01-17.ris

Import Option: [Select Favorites](#)

To:

- Click “Browse” and find the .ris file you created in Library Search
- The Import Option should be set to “Citation”
- Keep references on the same topic together by selecting a “group”
 - (You can also create a “New group” at this stage)

- In EndNote, go to “Collect”, and then “Import References”

- Click “Browse” and find the .ris file you created in Library Search
- The Import Option should be set to “Citation”
- Keep references on the same topic together by selecting a “group”
 - (You can also create a “New group” at this stage)
- You will get a message to say that your import was successful

Import References

1 references were imported into "Cancer" group.
