Exporting references - Web of Science

EndNote Basic is a free online reference management tool, which the Library can offer support for should you need it

Users can create an account by signing up through **Web of Science** – this provides additional citation styles and attachment storage

We recommend using a **personal email address** to register, so that access to the account continues after graduation

There is also an optional “**Cite While You Write**” plug-in for Microsoft Word (PC or Mac), which will insert citations and references into a document by linking directly to the online EndNote Basic account

There are different procedures for getting references into EndNote depending on which database you are using

Since Web of Science is from the same company as EndNote, it is quite straightforward to export references
